Do you have any comments or suggestions to make?

7 responses

Maybe let people choose from either online moodle posts or direct participation in class.
Of course researching in the matter helps deepen the knowledge. But I dind't like to be "forced" to post exactly 10 rich posts, when also having good participation in class.
(maybe try and write down the names of people who have 2 or more good things to say in class) that way one could spare 1-2 moodle posts. Since they have been really time consuming.

Otherwise I liked the course very much!
Even if the timing had me missing other classes.

more feedback about presentations

I learnt way more than in other courses, because it was not about learning by heart (and then forgetting the material again), but about understanding and getting interested in neuroscience. I also felt that the tutor was extremely well informed!

Forum participation took a long time when trying to really make an effort and do some research. So maybe it should be weighed a bit more (30-35%). Also, I learned a lot when you added more general information to some of the talks. I would have appreciated that a lot, if you had given some additional knowledge or input about each subject (even if it were just for the specific book chapter in general and not necessarily related to the exact studies presented). In total, I was pretty content with the course. If I compare my experiences

in this PS with what other friends of mine tell me about their PS, I am really glad I got into yours
It would be great if the lecturer would explain more directly in the debate and would give more examples and experiences from his own research . But it was the seminar with far the most quality!

Hi, I liked the seminar very much; it would have been cool, however, to hear a little bit more from the lecturer's side, insights from lab work, studies, previous work in the field; maybe a short intro before each session concerning content and circuits discussed would have been helpful; the chosen literature was great!

Best Proseminar I had yet. The focus on discussion in class and in the forum sparked a lot of interest in new topics. Transparent and fair grading System.
Will definitely recommend the course! 👍
